

Minimum Retail Pricing Guide

Licensed grocery and convenience stores will be able to set their own retail prices starting September 5, 2024, which means that they may retail products above, below or at the same price as LCBO, but minimum retail pricing (MRP) requirements remain in place. For the rules governing minimum retail pricing, refer to [Regulation O. Reg. \(746/21\)](#) for wine and [O. Reg \(750/21\)](#) for other products.

For your convenience, we have calculated minimum retail pricing for each category in this document. Some rates are increased annually; the next increase will occur on April 1, 2025.

How to read the minimum retail pricing tables

Step 1. For RTD, cider and beer, you will need to determine the Alcohol by Volume (ABV) on an individual product. This can be found on the label on the back of the product. More information about where to find ABV on a label can be [found here](#).

Step 2: Determine the package size e.g. how many milliliters and if it sold as a single unit or a 6-pack.

Step 3: If determining the MRP for beer, you will need to determine if it is a refillable container. A refillable container is typically brown in colour and contains a domestic product that is 341ml (see image on right). If you have any questions about whether a container is refillable or non-refillable, contact groceryandconvenience@lcbo.com.

Step 4: Find the applicable minimum retail price that you can sell this product.
